Benefits Of Using Microsoft Power Apps

Types Of Power Apps You Can Create

1. Canvas Apps - Canvas apps are built by dragging and dropping pre-built controls onto a blank canvas.

Canvas app design provides the following benefits:

- Pixel-perfect customization.
- Simple drag and drop design environment.
- Excel-style business logic.
- Native AI tools, address and map inputs, offline capabilities, and more.

2. Model-Driven Apps - With Model-driven apps, the layout is pre-determined and designated by the components.

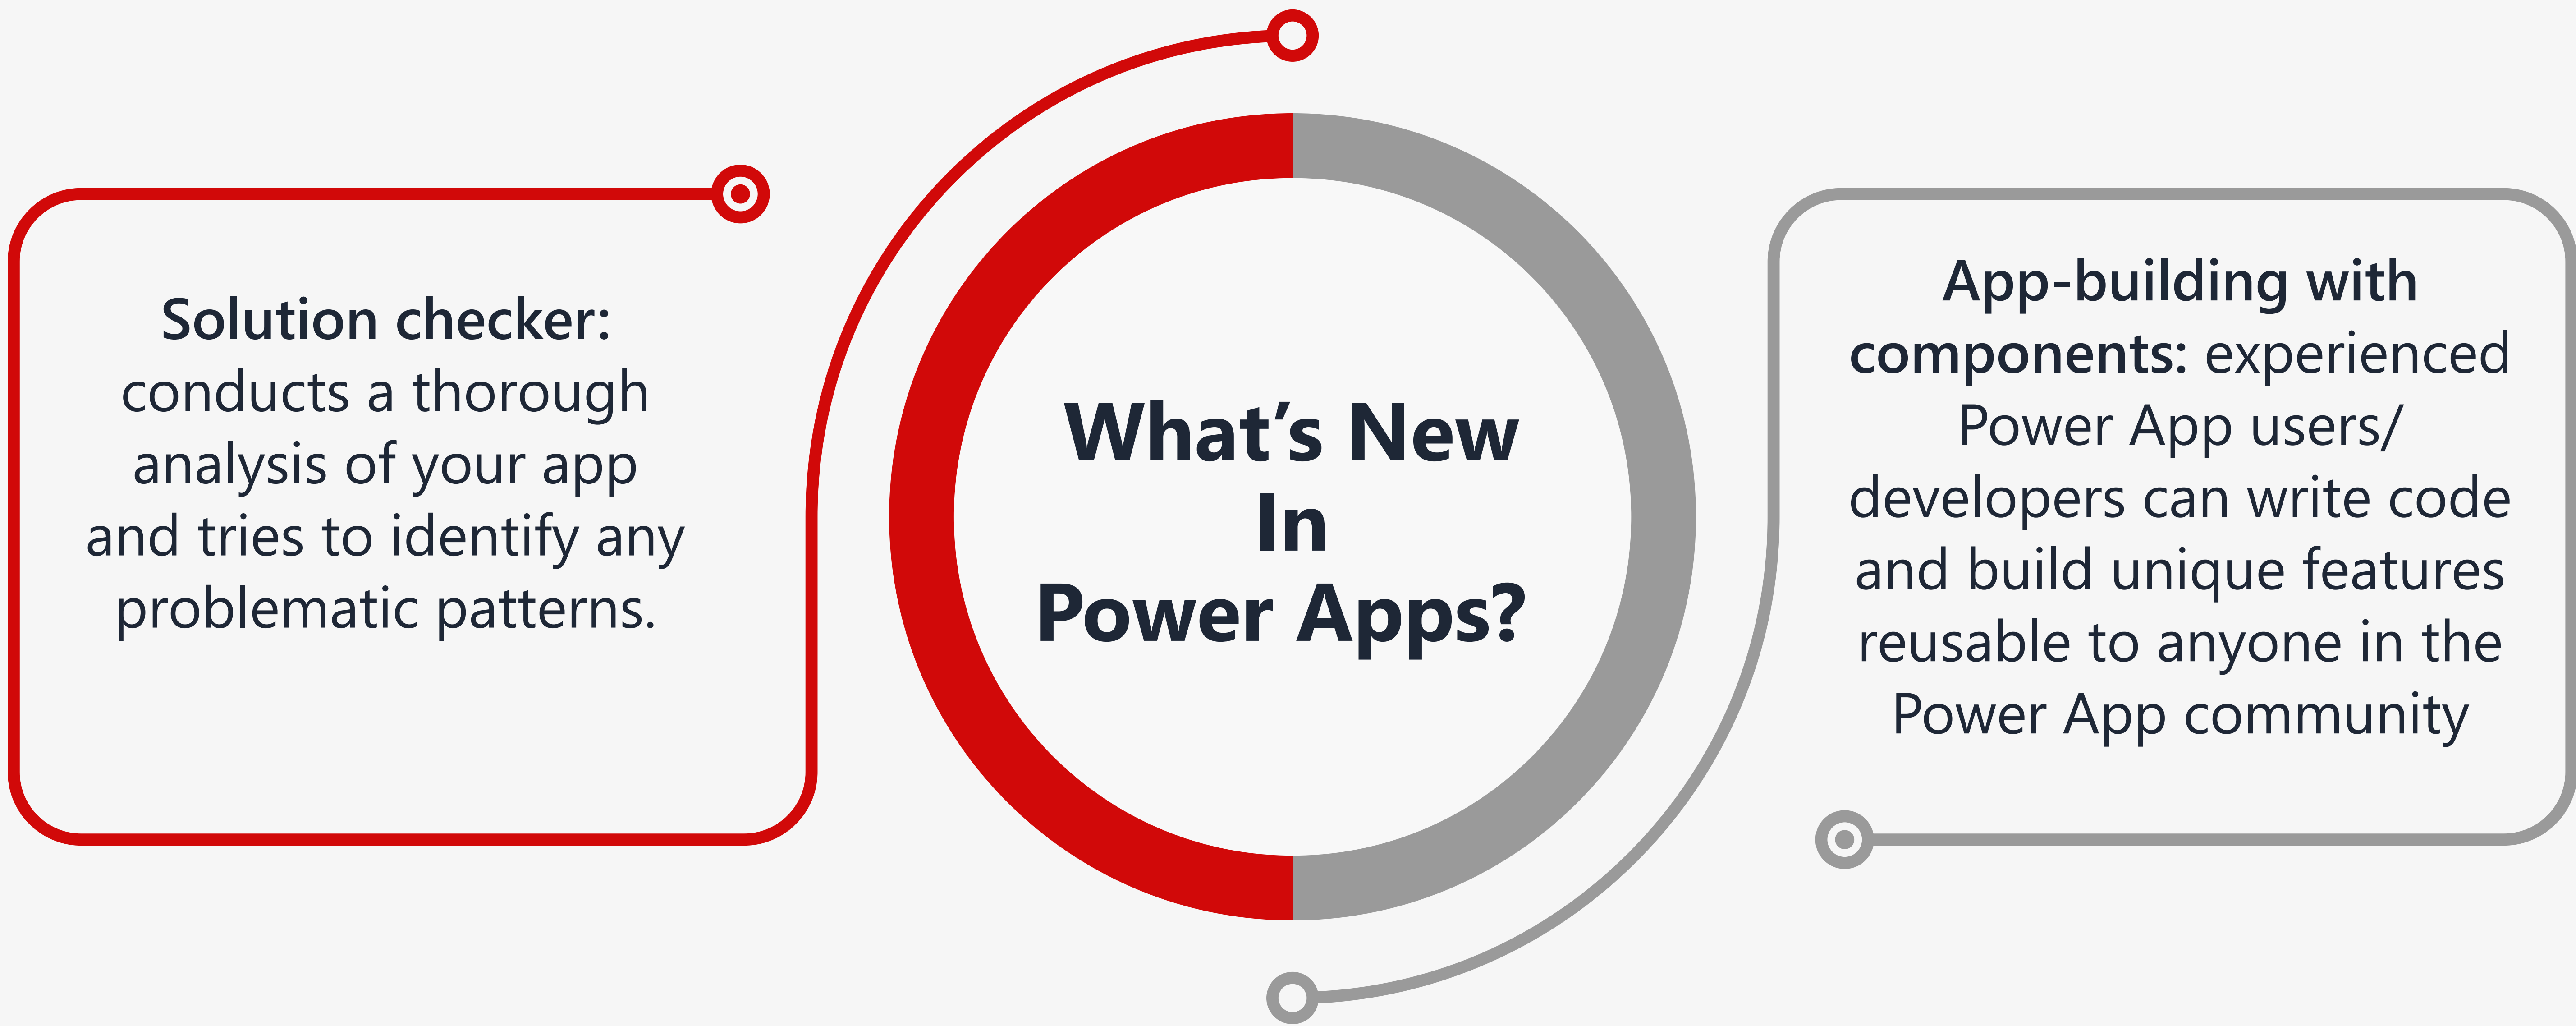

Model-driven apps provide the following benefits:

- Uses Dynamics 365’s Unified Interface.
- The component-focused no-code design environment.
- Integrated business process flows.
- Leverage the power of Dataverse.

3. Portals - Power Apps Portals is focused more on website design and is an easier way for people to create external-facing websites.

Power Apps Portals provide the following benefits:

- Create custom websites to share your data with customers, partners, colleagues, and whoever you like.
- Create portals without the need for difficult code or expert developer skills.
